## **Risk Management**

**Risk register** 

#### WHAT?

- Risk management = continuous process to identify, analyze, monitor and control risks
- Risk register = identify and handle causes of project deviations

#### WHY?

- Recommended to avoid "disaster" situations
- Included in your continuous reporting

# Tools for Exploitation & IP management

- Under the exploitation management task
- Exploitation leader to oversee process (task leader) and ask for information from partners
- Help discussions on ownership, protection and exploitation of results
- Important for jointly owned results
- Periodic workshops to discuss with all partners

## **IPR issues**

IPR Matrix

- **Background IP** know-how/knowledge/data held by beneficiaries and brought to the project
  - $\Rightarrow$  attached to generated project assets to help determine access rights, ownership issues and IPR
- Foreground IP results/info generated under the project
  - $\Rightarrow$  to create a concrete mapping of project results and enhance the IP portfolio
- **Exploitable result** outcome of project that can be commercialized/exploited as a standalone result
  - $\Rightarrow$  based on the FG, ID the exploitable assets + IPR management procedures (protection, access rights., exploitation plans...)

#### WHY?

 To help the coordinator to properly report continuously these elements

## Tool for Dissemination & Communication

- Under the dissemination and communication work
  package
- Dissemination and communication leader to oversee and ask for information periodically

## **Dissemination & Communication in HE**
